**Accuracy:
0.02% or 0.05%**

Innovative-Developing Enterprise Calmet Ltd.

- ❑ Calmet = **CAL**ibrators + **MET**rology
- ❑ founded in **1989**, roots come from LUMEL, big factory of measurement equipment in Poland, Zielona Gora
- ❑ designing, production, selling and servicing new kind of calibrators and electric equipment testers
- ❑ employs over 15 engineers, including 3 with Ph.D.
- ❑ cooperates with University of Zielona Gora; common projects and lectures
- ❑ since 1996 – electricity meters testing and power network parameters analysing
- ❑ since 2002 – generating and measuring network quality parameters
- ❑ since 2006 – automation of electro-utility automatic protective equipment testing
- ❑ since 2011 – automatic Test Benches for energy meter testing

Measurement Equipment since 1989

Customer Support in problems solving

Energy meter testers, Current Transformers testers, Power quality analysers

AC/DC Voltage, Current, Power & Resistance Calibrators, Test Benches

Control Software for measurement equipment

3 phase U,I,φ,P,Q,S,E

1 phase U,I,φ,P,Q,S,E

1 phase U,I,φ,F

Multifunctions DC/AC

3 phase Test Bench

1 / 3phase Phantom Load 0...5A

C300 outputs

C300 inputs

In Manual Mode it is possible to set:

- Voltages up to 3 x 560V
- Currents up to 3 x 120A
(360A in single phase connection)
- Frequency in range 40...500Hz
- Phase angles in range 0...360°
- Wave shapes of signals
- Signal changes in time

Settings by PC

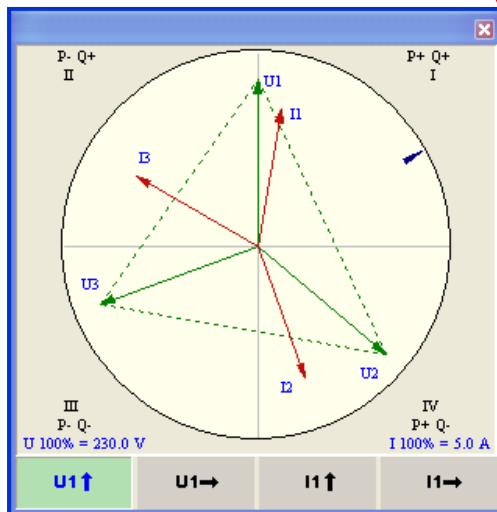

Only in Automated Mode

In Automated Mode it is possible to test:

- Electricity meters
- Protective relays
- Current transformers
- Current clamps
- Measurement transducers

Device Under Test

Voltage:

- range: 0.5000V ... 560.000V
- uncertainty: $\pm 0.02\%$
- short term stability: $\pm 0.005\%$
- long term stability: $\pm 0.01\%$
- temp. drift: $\pm 0.0005\%/1^\circ\text{C}$

Maximum load:

- 560mA@70V
- 280mA@140V
- 140mA@280V
- 70mA@560V
- sin distortion: 0.05%

Frequency:

- range: 40.000Hz... 500.000Hz
- uncertainty: $\pm 0.005\%$

Phase shift:

- range: 0.00° ... $\pm 360.00^\circ$
- uncertainty: $\pm 0.05^\circ$

Power:

- range: 0...3 x 67200 W,var,VA
- resolution: 0.00001-1W,var,VA

Maximum load:

- 17V@0.5A
- 8.5V@6A
- 3.3V@20A
- 0.70V@120A
- sin distortion: 0.1%

Current:

- range: 0.001000A ... 120.000A
- uncertainty: $\pm 0.02\%$
- short term stability: $\pm 0.005\%$
- long term stability: $\pm 0.01\%$
- temp. drift: $\pm 0.0005\%/1^\circ\text{C}$

Waveform: harmonics (up to 3200Hz)

Waveform: interharmonics (up to 9kHz)

Calibrator output signal change versus time

Single Voltage Dip (100ms)

Periodic Voltage Swells (2 periods)

Single Voltage Interruption (100ms)

Single Current Shock (1 period)

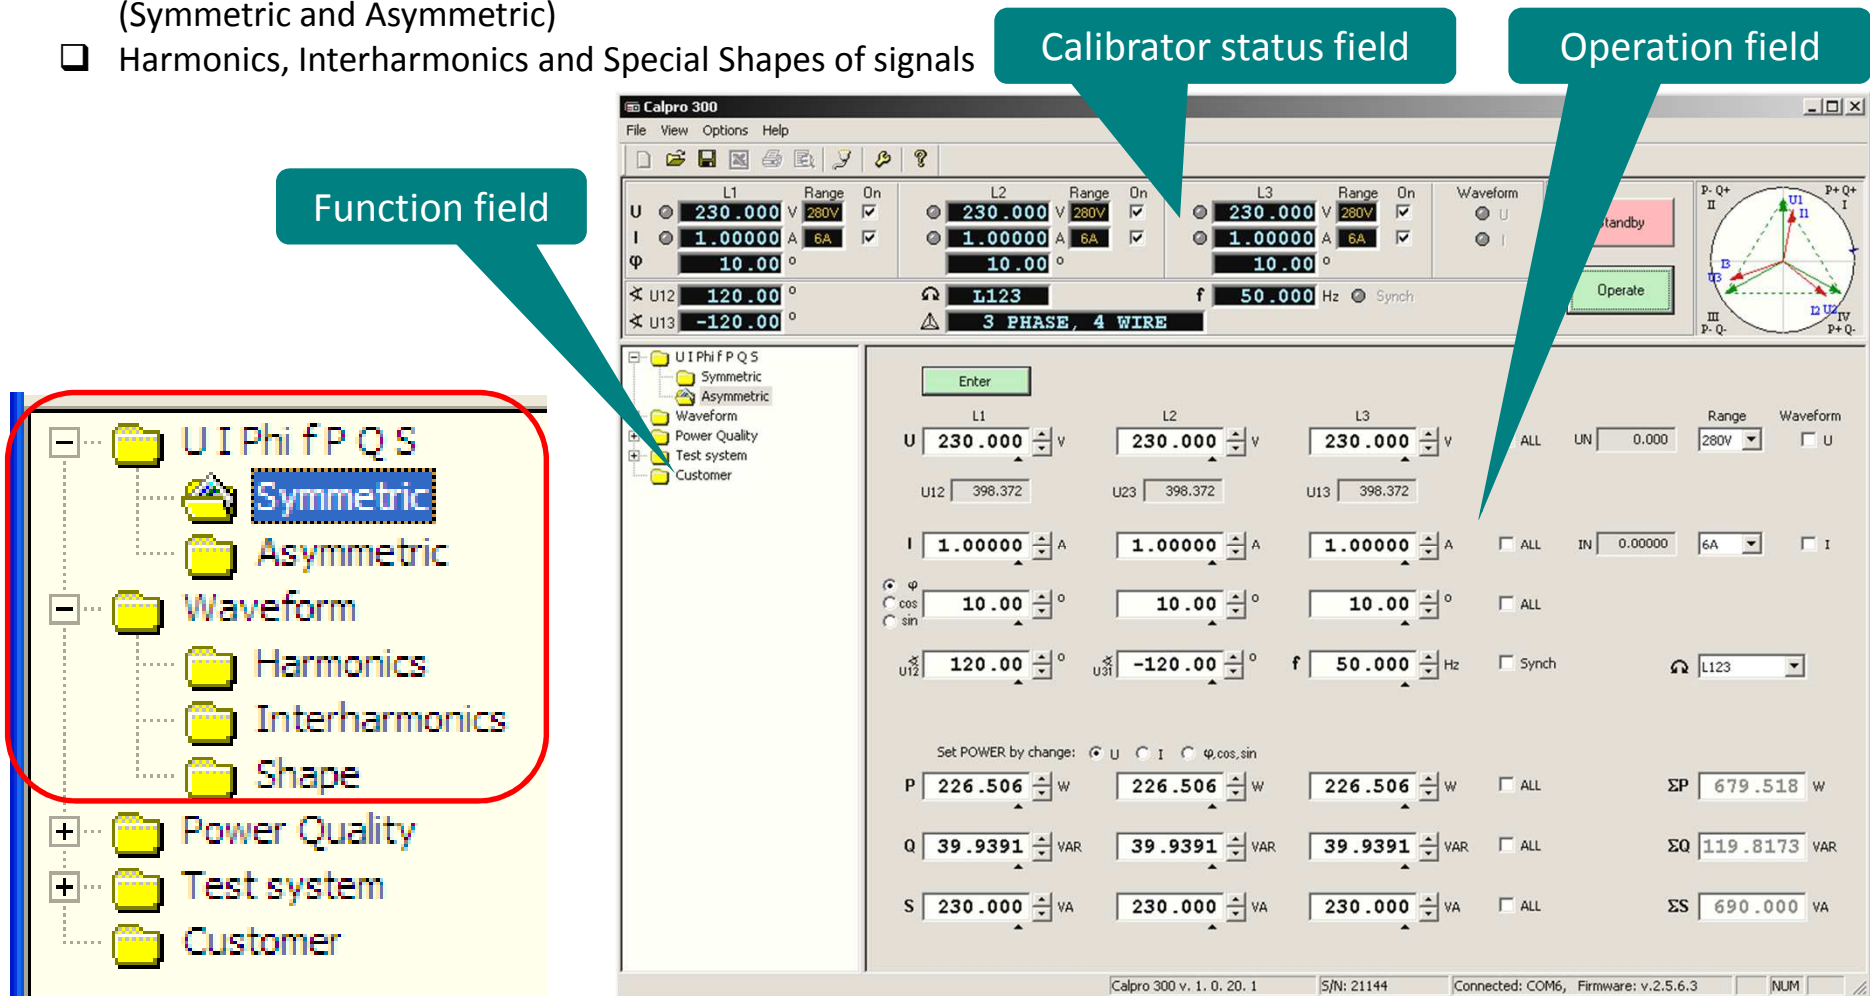

C300 is controlled via RS232/USB by PC Software

The transmission protocol (simple text eg.: U_230,57.70,1[CR][LF]) is available for customers

Calpro 300 Basic version enables setting:

- voltages, currents, frequency, phase angles and powers
(Symmetric and Asymmetric)
- Harmonics, Interharmonics and Special Shapes of signals

The screenshot shows the Calpro 300 software interface. A callout labeled "Function field" points to a tree view on the left containing folders for "U I Phi f P Q S", "Symmetric", "Asymmetric", "Waveform", "Harmonics", "Interharmonics", "Shape", "Power Quality", "Test system", and "Customer". The "Symmetric" folder is highlighted. A callout labeled "Calibrator status field" points to the top right of the main window, showing a "Standby" button and a "Operate" button. A callout labeled "Operation field" points to the bottom right of the main window, showing a 3-phase phasor diagram and various power and quality parameters.

Function field: A tree view on the left side of the software interface, containing folders for "U I Phi f P Q S", "Symmetric", "Asymmetric", "Waveform", "Harmonics", "Interharmonics", "Shape", "Power Quality", "Test system", and "Customer". The "Symmetric" folder is highlighted.

Calibrator status field: A section in the top right of the main window, containing a "Standby" button and an "Operate" button.

Operation field: A section in the bottom right of the main window, containing a 3-phase phasor diagram and various power and quality parameters.

Calpro 300 PC Software allows to create Data Base with:

- **Type** of Device Under Test – properties of device like meter constant, range, class of accuracy etc.

- **Procedure** – set of load points for testing (settings of U, I, φ , f, P, Q, S, harmonics, no. of impulses...)

and then to perform testing:

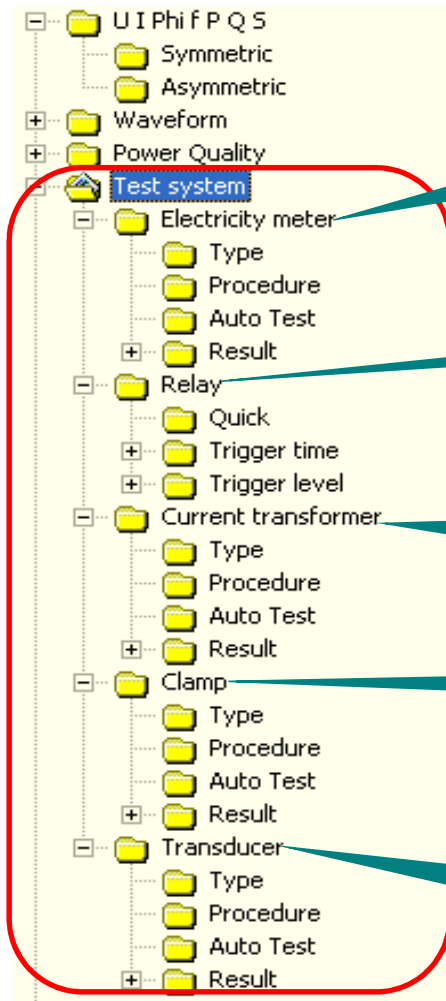

- **Auto Test** – automatic testing based on **Type** and **Procedure**

and Result evaluation:

- **Result** – presentation in form of **Table** (user editable) or **Diagram** with possibility of printout or export to Excel

Calpro 300 TS (Test System) version enables automatic testing the following devices:

Electricity meter function for automatic testing of meters

Relay function for automatic testing of protective relays

Current transformer function for automatic testing of current transformers

Clamp function for automatic testing of current clamps

Transducer function for automatic testing of measurement transducers

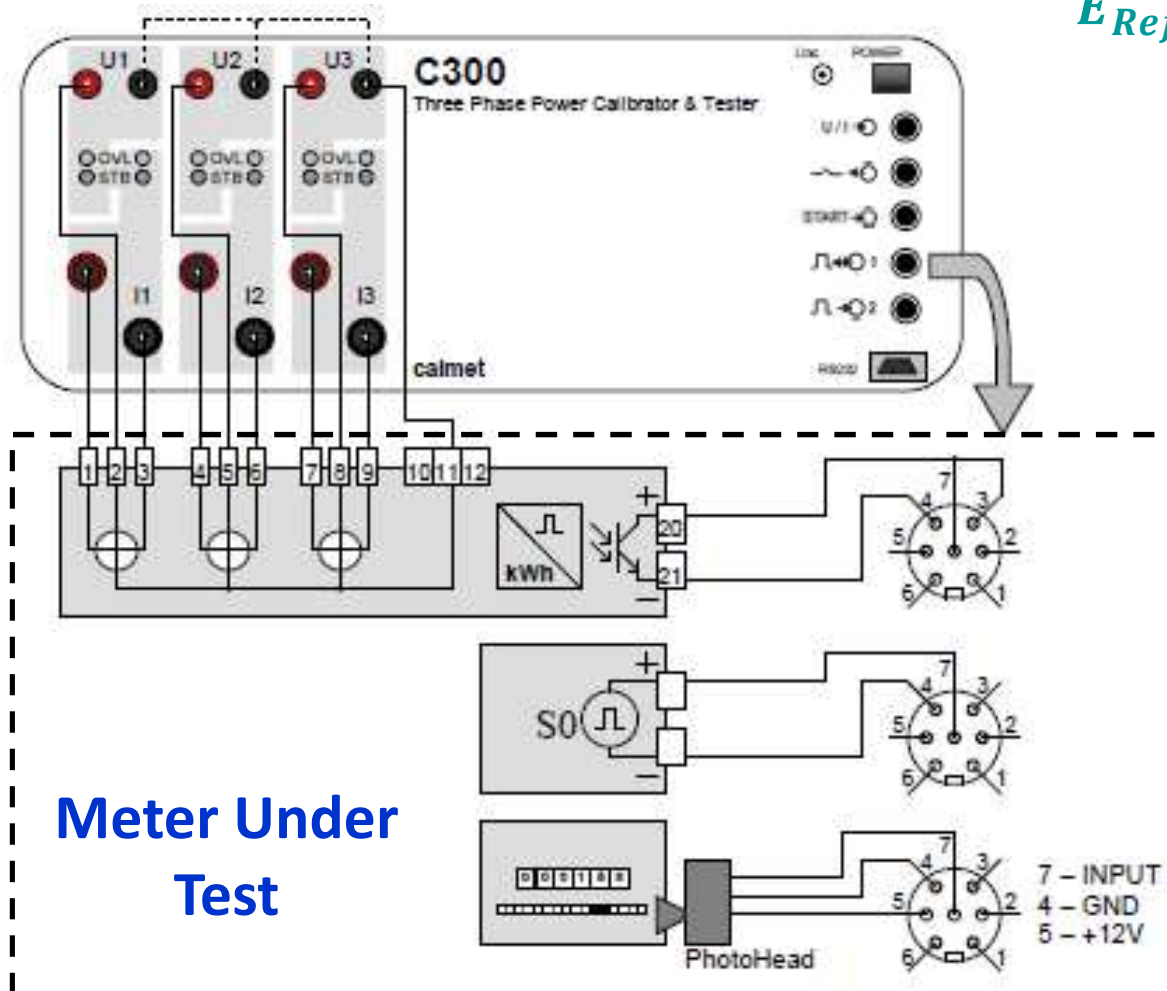

Testing Energy meter with C300 as a Source and Reference

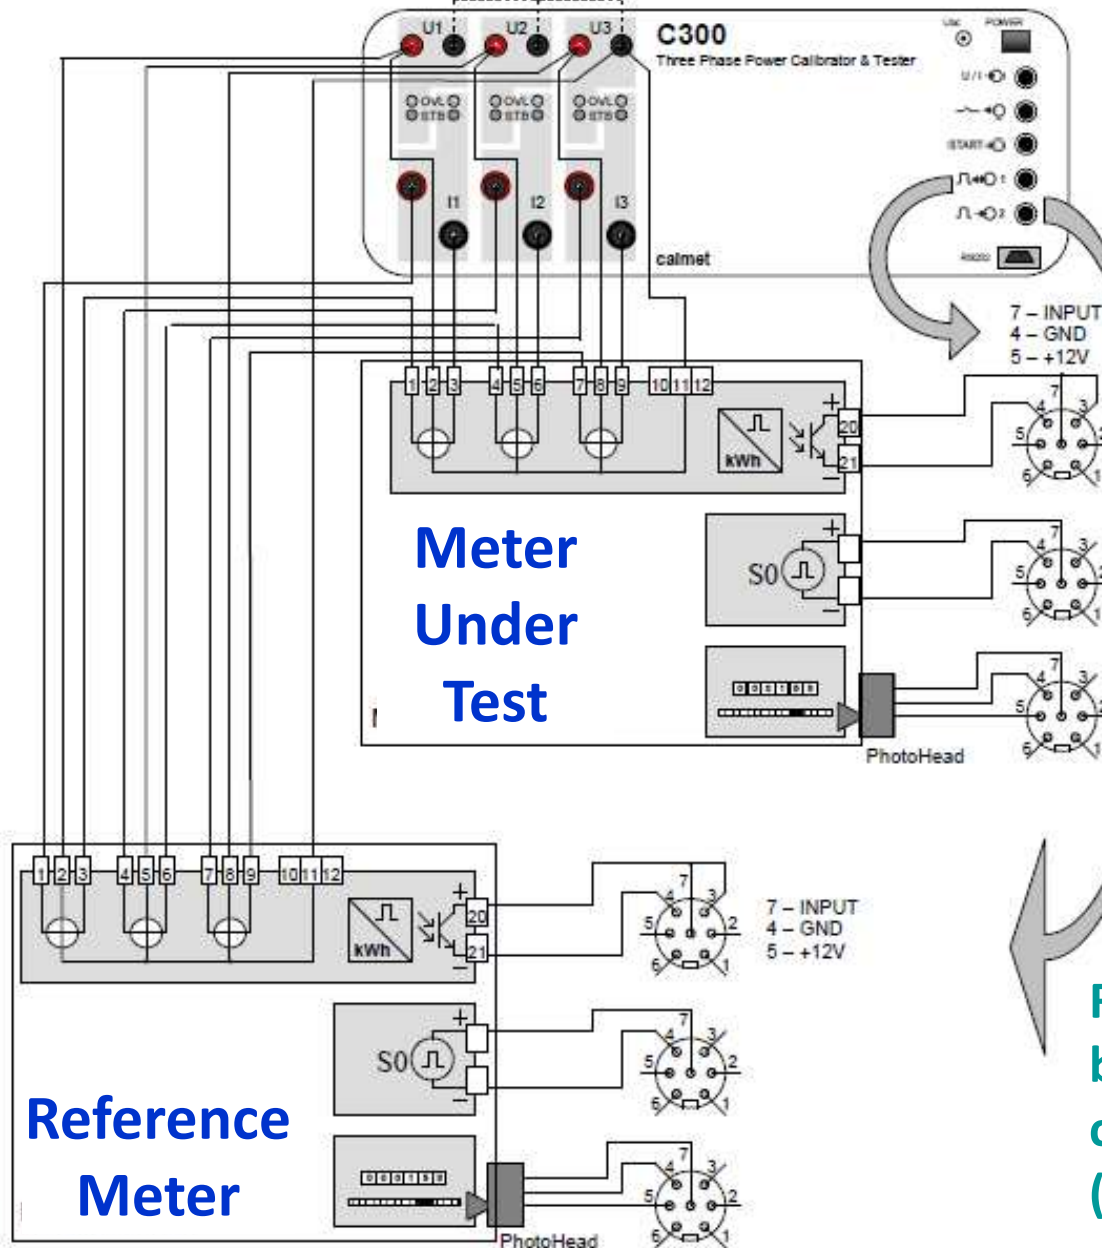

Reference Energy is calculated on base of equation:

$$E_{Ref} = U \times I \times \cos\varphi(\sin\varphi) \times t$$

Where:

- E_{ref} – reference energy
- U – set value of voltage
- I – set value of current
- $\cos/\sin\varphi$ – power factor
- t – time of impulses counting

Testing Energy meter with C300 as a Source and Error Calculator with external Reference Meter

Reference Energy is calculated on base of number of impulses and constant of any Reference Meter (Radian, ZERA, MTE....)

$I_{pmax} = 120A$
when using current I1 only

$I_{pmax} = 360A$
when shorted I1, I2 and I3
HI terminals and I1, I2, I3
LO terminals

Up to 360A in parallel

CT 100A / 5A

**1000A clamp and sum of
currents**

**1000A clamp with 100 turns
coil**

100A clamp and 100A cable
